Breathwear

Breathing Rate

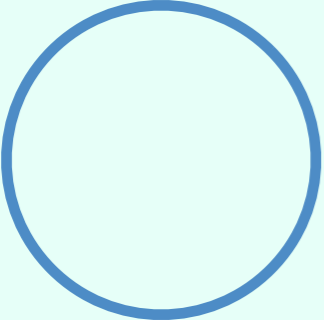

How to design and evaluate user interface for respiratory regulation?

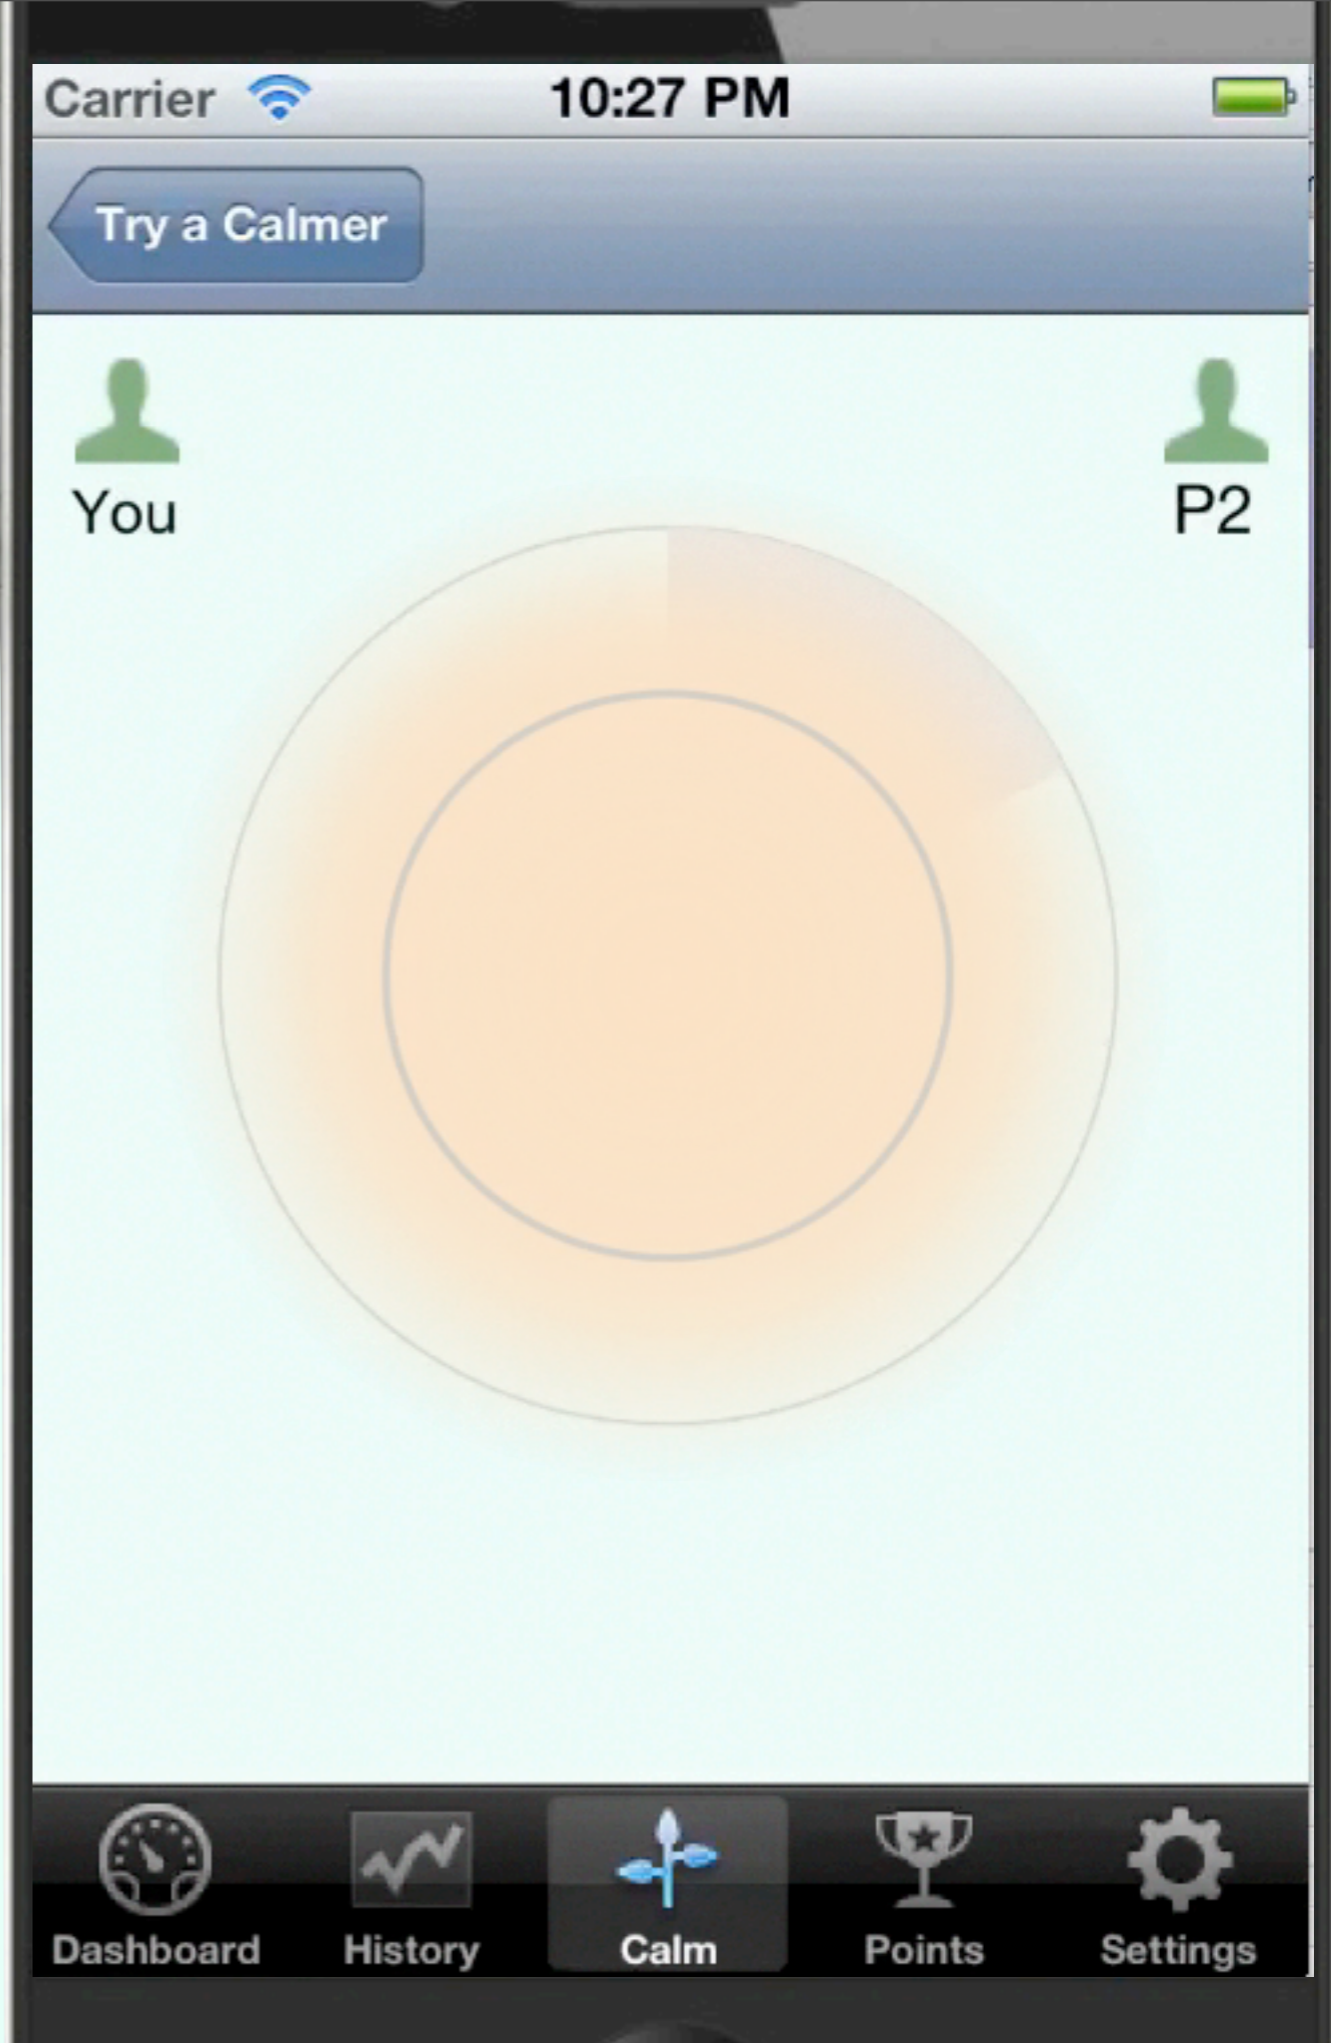

Two types of guide

Visual & Auditory

Visual Guide Design

 = Guide

 = User

Visual Guide Design

 = Guide

 = User

Auditory Guide Design

Auditory Guide Design

Results

Study Result (N=14)

Study Result (N=14)

Self-reported Calming Effects

A > V (p=0.038)

Study Result (N=14)

Self-reported Calming Effects

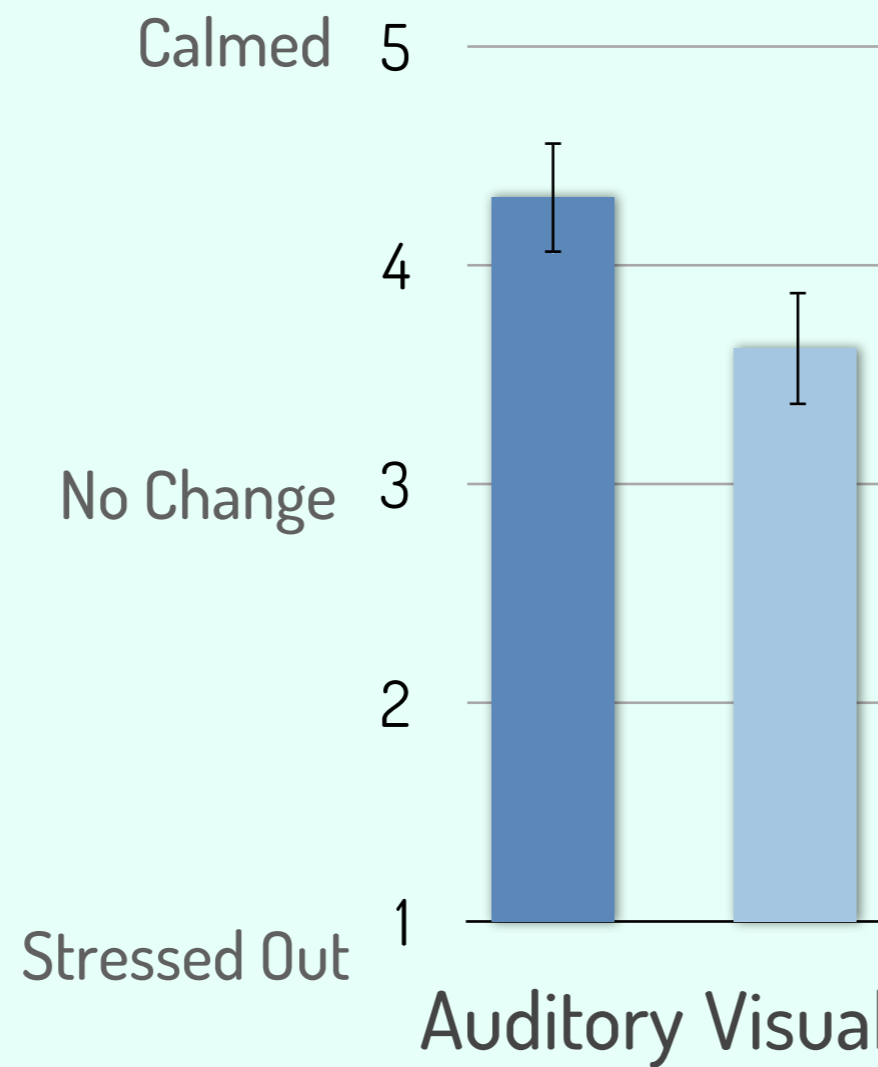

• Naturally Auditory

A > V (p=0.038)

Study Result (N=14)

Self-reported Calming Effects

- Naturally Auditory
- Attention

A > V (p=0.038)

Study Result (N=14)

Self-reported Calming Effects

A > V (p=0.038)

Study Result (N=14)

Self-reported Calming Effects

A > V (p=0.038)

Breathing Rate Reduced

A < V (p>0.05)

Summary

How to design and evaluate user interfaces
for respiratory regulation?

Audio > Visual

Conformity \neq Self-rated Score

Thanks

Method

- N=14
- Four Design

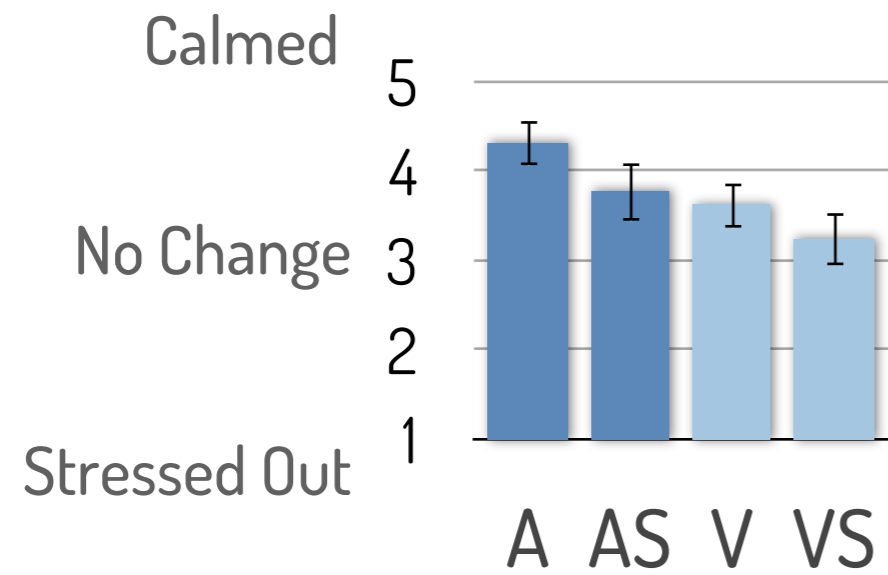

Design Spaces

Device	Specialty Device	Smart Phone	Desktop
User Attention	Full Attention	Semi Attention	
Practice Duration	1-5 mins	5-20 mins	> 20 mins
Stimulus	Continuous		Rhythmic
Type of Guidance	Auditory	Visual	Physical Contact
Evaluation	Self-report Score		Breathing Rate
Social Interaction	None	Asynchronous	Synchronous
